

Install Extension From Magento Marketplace

If you have purchased this extension from the Magento Marketplace then please follow the below process or visit [this](#) link.

#1 Get Access Keys

You need to get access keys, navigate to **My Profile** in Magento Marketplace, then choose **Access Keys** in the **My Products** section.

Go to **Magento 2** and then you need to copy both the Access Keys – Public Key and Private Key. These access keys will be needed in the next steps for authentication.

To install an extension or download the extension code for review, you need to use Composer. See "How to Install" section below for instructions. To learn more about Composer, click here: <https://getcomposer.org>.

All Platforms ▾

All Editions ▾

Magento 2

Open Source (CE)

Multi Vendor
Marketplace

Component name:

webkul/module-marketplace

Versions available

v4.0.0 ▾

How to Install:

1. Please ensure you are using correct access keys
([My Profile - Access Keys](#))
2. Paste the access keys in your auth.json file inside your project
3. Use the "composer require <module_name>:<version>" command to add the extension to your project. If you just need the extension package code for a specific version (for example, for code review purposes), you can initialize an empty project and just add composer require statement for the extension to a blank composer.json
4. You can see the list of versions in the selector below the extension module name

For detailed instructions, see [DevDocs](#)

After that, navigate to your Magento project directory and update your composer.json file in the following format.

composer require <component-name>:<version>

For example, to install version 5.0.0 of this extension you need to run the following command:

composer require webkul/marketplace-shipping-availability-check:5.0.0

#3 Enter Access Keys

Now you will need to enter the [Access Keys](#) that you obtained as explained in the first step #1 Get Access Keys. Wait for Composer to finish updating your project dependencies and make sure there aren't any errors.

#4 Run Command

You need to run the following commands:

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy
```

```
php bin/magento indexer:reindex
```

```
php bin/magento cache:flush
```

Multi-Lingual Configuration

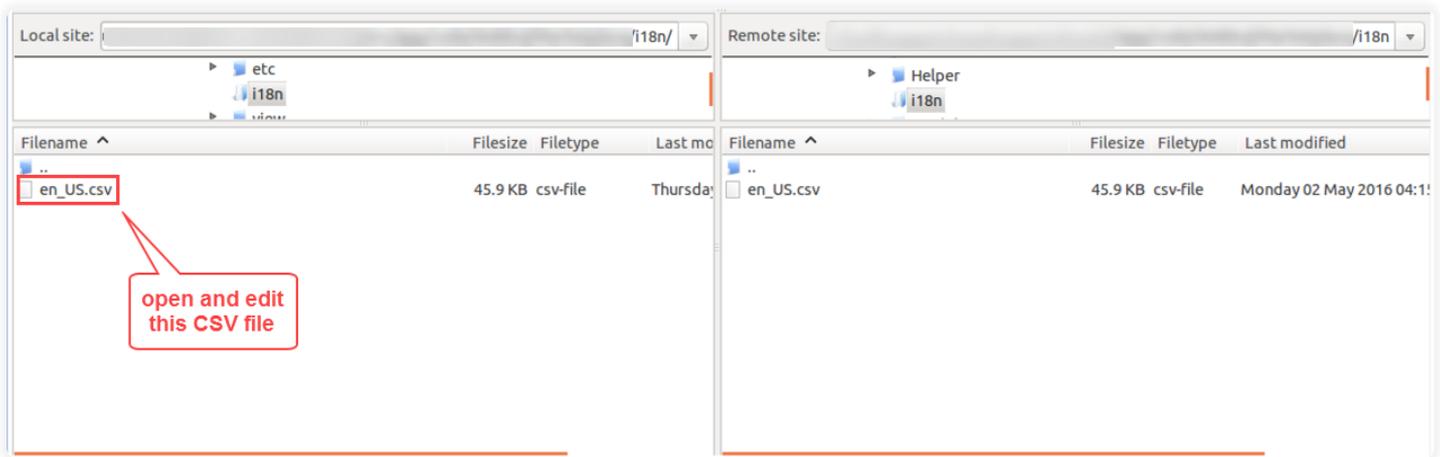

For **Multilingual** support, please navigate through **Store > Configuration->General > Locale Options** and select your desired language from the **locale** option.

The screenshot shows the Magento Configuration interface. The left sidebar contains a navigation menu with 'STORES' highlighted. The main content area is titled 'Configuration' and shows the 'Locale Options' section. The 'Locale' dropdown is set to 'English (United Kingdom)'. A 'Save Config' button is located in the top right corner. Red callouts highlight the 'Save Config' button, the 'Locale' dropdown, and the text 'select your language'.

Module Language Translation

If you need to do the module translation, please navigate the path **app/code/Webkul/MpZipCodeValidator/i18n** and edit the file named

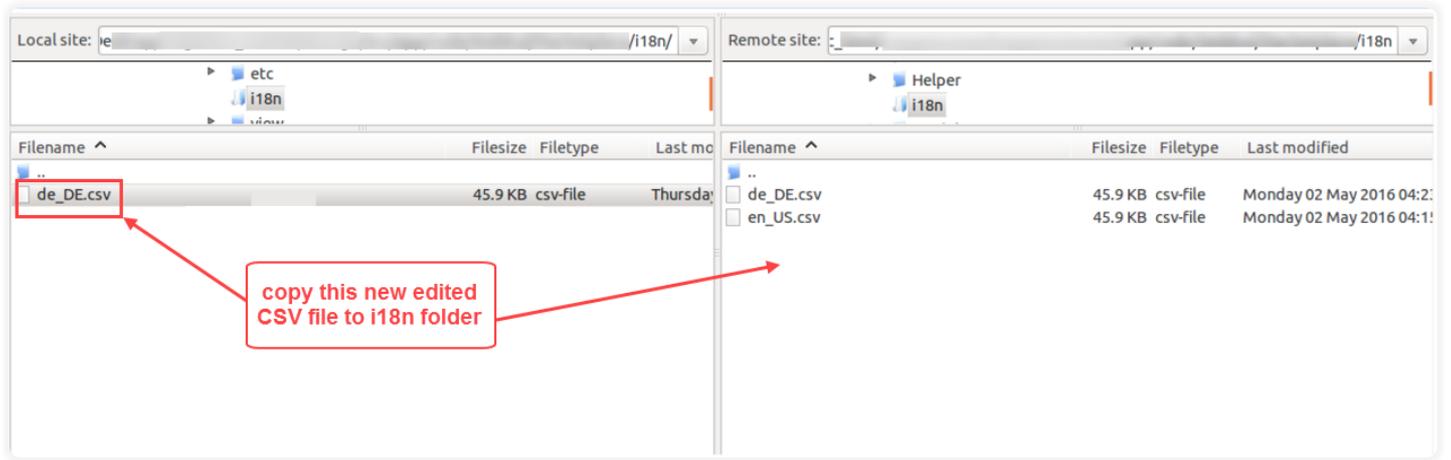

en_US.csv as shown in below screenshot.

Once you have opened the file for editing, replace the words after the comma(,) on the right with your translated words.

```
Manage Region Entry,Manage Region Entry  Untitled-1 ●
1  Manage Region Entry,Manage Region Entry
2  Save Entry,Save Entry
3  Edit Region,Edit Region
4  New Region,New Region
5  Region Information,Region Information
6  Regions disabled succesfully,Regions disabled succesfully
7  Region Name,Region Name
8  Enabled,Enabled
9  Disabled,Disabled
10 CSV,CSV

20 Marketplace Add Regions,Marketplace Add Regions
21 Something went wrong.,Something went wrong.
22 Regions enabled succesfully,Regions enabled succesfully
23 Regions disabled succesfully,Regions disabled succesfully
24 Something went wrong.,Something went wrong.
25 Marketplace View Regions,Marketplace View Regions
26 Delete,Delete
27 Zipcode List,Zipcode List
28 Marketplace Zipcode Validator Regions,Marketplace Zipcode Validator Regions
29 Click,Click
30 Edit,Edit
31 Download Example CSV,Download Example CSV
32 Enable,Enable
33 Do you want to enable selected entries?,Do you want to enable selected entries?
34 Disable,Disable
35 Do you want to disable selected entries?,Do you want to disable selected entries?
36 Id,Id
```

After editing the CSV file, save it and then upload it to the same path **app/code/Webkul/MpZipCodeValidator/i18n**. The module will now get translated into your desired language. It supports both the **LTR** and **RTL** languages.
