

Installation Guide- Custom Option Marketplace Add-On V5.0.0

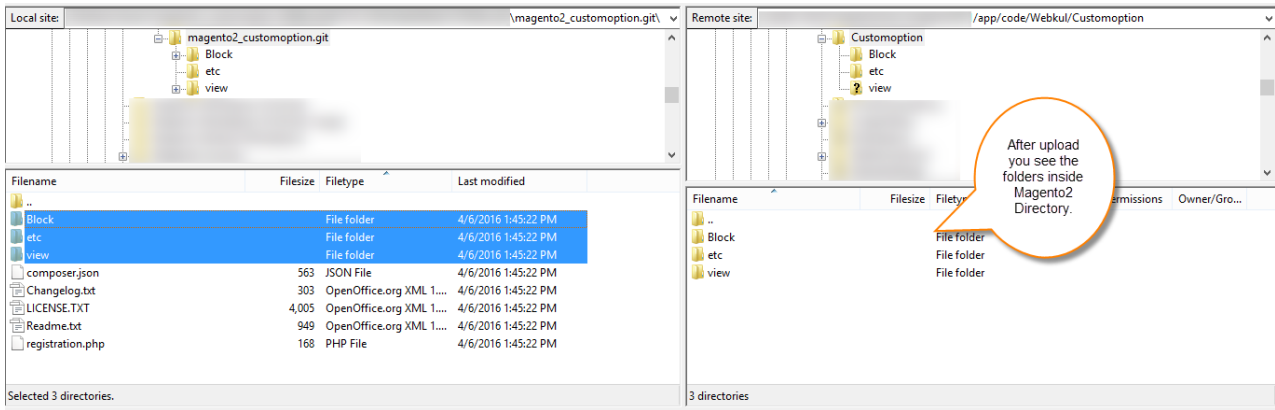

Customers will get a **zip folder** and they have to extract the contents of this zip folder on their system. The extracted folder has an **src** folder, inside the src folder you have the **app** folder. You need to transfer this **app** folder into the Magento2 root directory on the server as shown below.

If you have downloaded the module from **Magento Connect** then unzip the respective extension zip and create **Webkul**(vendor) then **Customoption**(module) name folder inside your Magento root directory as **app/code/Webkul/Customoption** and then move all module's files inside **/app/code/Webkul/Customoption/** folder in Magento root directory.

After the upload, you can see the folders in your Magento2 Root Directory.

After the successful installation, you have to run these commands in the Magento2 root directory.

First command-

```
php bin/magento setup:upgrade
```

Second Command –

```
php bin/magento setup:di:compile
```

Third Command –

```
php bin/magento setup:static-content:deploy
```

After running the commands, you have to flush the cache from Magento admin panel by navigating through->**System->Cache management** as shown below.

Cache Type	Description	Tags	Status
<input type="checkbox"/> Configuration	Various XML configurations that were collected across modules and merged.	CONFIG	ENABLED
<input type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	ENABLED
<input type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	ENABLED
<input type="checkbox"/> Reflection Data	API interfaces reflection data.	REFLECTION	ENABLED
