

Excessive Attempt Lock v4.0.2

Excessive Attempt Lock enables an additional security layer to prevent hackers to abuse your admin and customer logins by attempting many easy-to-guess passwords consecutively.

This method is called as Brute forcing. This technique characterized by the attitude, “try and try till you succeed”. It is one of the oldest methods of breaking into something.

This technique can be used to attack the website from the admin login or from the customer login. Here the Excessive Attempt Lock came into the force. It can disable an admin user or the customer for a defined number of minutes.

Features

- Admin can enable or disable the module.

- Work for both admin and customer login.

- Admin can set no. of attempts and disable time for both admin and the customer.

- Display unlock timer for both admin and customer over the login page.

Configuration

After the successful installation of the module, the admin can configure this module under “**Store > Configuration > Webkul > Excessive Attempt Lock**”.

Excessive Attempt Lock Settings ⌵

Active [global]

Admin Login Settings ⌵

Login Attempts [global]
How many times Admin can try login (Ex. 3)

Excessive Attempt Lock Settings :

Active – Here the admin can choose between “Yes” to enable the module or “No” to disable the module.

Admin Login Settings :

Login Attempts – The admin can define after how many logins attempts the login will be disabled.

Disable Login Time in Minutes – The admin can define the disable time in minutes of the user to log in.

Customer Login Settings :

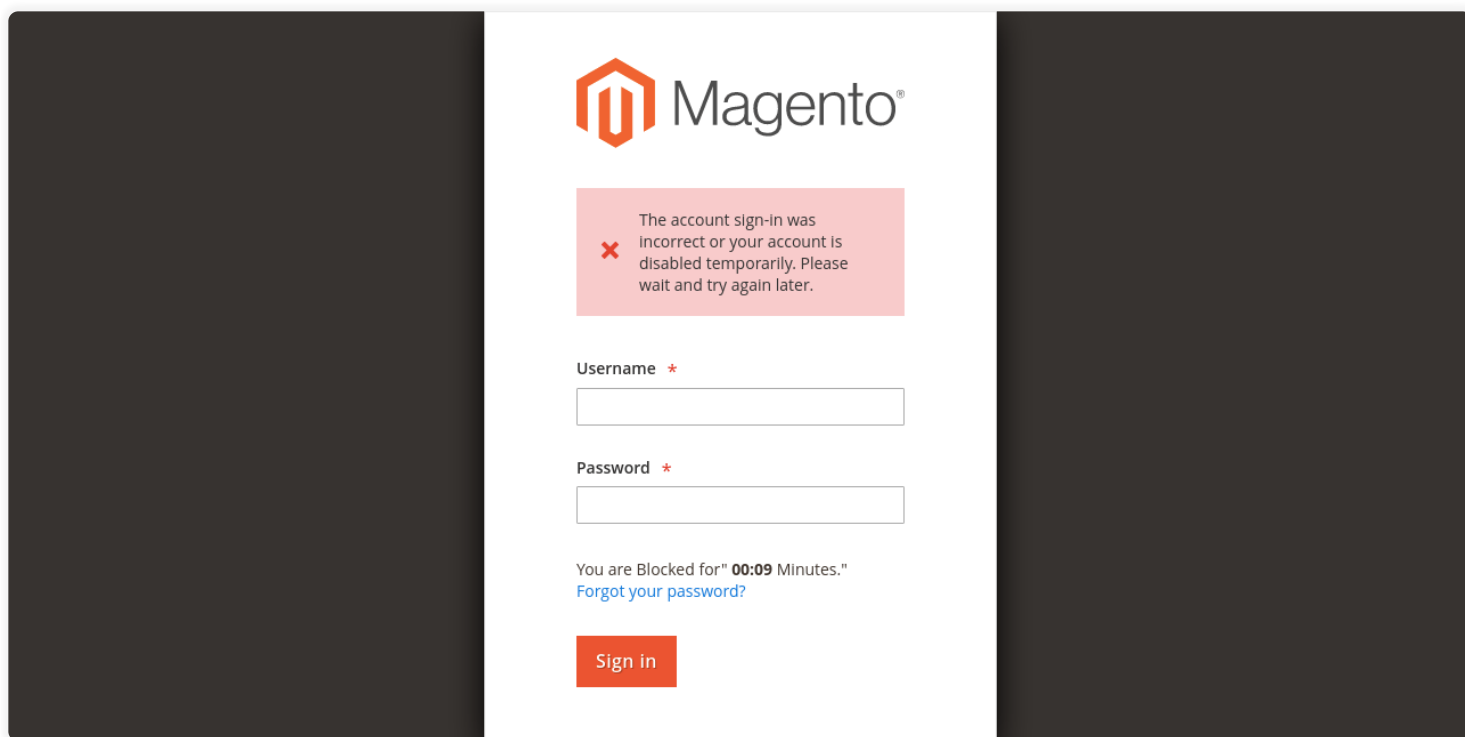

Login Attempts – The admin can define after how many logins attempts the login will be disabled.

Disable Login Time in Minutes – The admin can define the disable time in minutes of the user to log in.

Note: The admin or the customer needs to enter the correct login id to enable their account.

Admin View

If the admin user enters the wrong password more then allowed a number of attempts, the user will be disabled. The user is not able to log in for the number of minutes configured in the admin panel.

Once, the blocked time is over, the admin can see a message displaying that “You are ready to login” as per below image:

× The account sign-in was incorrect or your account is disabled temporarily. Please wait and try again later.

New Customers

Creating an account has many benefits: check out faster, keep more than one address, track orders and more.

Create an Account

Once, the blocked time is over, the customer can see a message displaying that “You are ready to login” as per below image:

The screenshot shows the LUMA website's customer login page. At the top left is the LUMA logo. At the top right is a search bar with the text "Search entire store here..." and a shopping cart icon. Below the search bar is a navigation menu with links for "What's New", "Women", "Men", "Gear", "Training", and "Sale". The main heading is "Customer Login". A red error message banner at the top of the login area reads: "The account sign-in was incorrect or your account is disabled temporarily. Please wait and try again later." Below this, there are two columns: "Registered Customers" and "New Customers". The "Registered Customers" column contains the text "If you have an account, sign in with your email address." followed by "Email *" and a text input field containing "johndoe@mail.com". Below that is "Password *" and an empty password input field. At the bottom of this column is the text "You are ready to login" and a "Sign In" button. The "New Customers" column contains the text "Creating an account has many benefits: check out faster, keep more than one address, track orders and more." and a "Create an Account" button.

Thus, that’s all for **Excessive Attempt Lock** module. Still, have any issue please feel free to add a ticket at <https://webkul.uvdesk.com/>
