

Split Cart Marketplace Add-On

webkul.com/blog/marketplace-splitcart-magento2/

Marketplace Splitcart for Magento2 will allow the buyers to add more than one seller's products to their cart. While a particular seller's products added in a cart are being processed for checkout, the remaining products will remain in the cart so that payment can be made immediately or later as per buyer's convenience.

This module is an add-on of Multi Vendor marketplace Module. To use this module you must have installed first the **Multi Vendor Marketplace**.

Features Of Marketplace Splitcart For Magento2

- Buyer can add multiple seller's products to their cart.
- Admin can enable/disable the Marketplace Split Cart option.
- While a particular seller's products added in a cart are being processed for checkout, the remaining products will remain in the cart so that payment can be made immediately or later as per buyer's convenience.
- The Shopping cart will be split based on sellers.
- Products sold by the admin can also be added to the cart.
- Existing Shipping methods will work in this case that means admin don't need to use any additional shipping modules as after the cart split checkout will work like normal single seller checkout and shipping will be calculated based on existing shipping method.
- Existing payment methods will work in this case that means admin don't need to use any additional payment modules as after the cart split checkout will work like normal single seller checkout.

Click to go to Checkout page for seller two.

Product of second seller.

Use case of Marketplace Splitcart

Splitcart is an add-on of Magento2 Marketplace. It helps the buyer to add multiple products of different sellers to his Cart and at the time of checkout the buyer has to proceed checkout differently for each seller or we can say the cart page will show different checkouts of different sellers.

Efficient way to manage ORDERS

The Split cart add-on of Magento2 Marketplace will facilitate the order management system. By this add-on the generation of Invoices, Shipment, Credit memo can be managed separately which will be very much efficient for managing orders.

Hassle free SHIPPING

By this add-on, shipment can also be facilitated. Buyer can choose different shipping methods for different sellers. If in case buyer is ordering 3 products of different seller and one of these 3 products is very much important and the buyer need it urgently so he can

easily choose express 1 day delivery for that product only and normal shipping for other products so that he don't need to give extra cost for express shipping for those 2 products which are less important. Which will cause a saving of money to the buyer.

Clear PAYMENT options

By splitcart add-on payment option is very much benefited. It is very much helpful for the buyer as well as admin too.

Using this addon buyer can choose from different payment options for different sellers. Like in case a seller is providing COD and other seller are not providing this payment option in that case buyer can select cod for that seller and other payment option for others.

The seller can also be benefited because he won't need to use any other payment module because in the cart the checkout is separated and works as normal single seller checkout.

Impressive DISCOUNT handling

Different seller gives a different type of discount to their buyers like discount coupons, credit points and much more. So those discounts can be easily processed at the cart page with the help of Split cart.

Effortless RETURNS

Splitcart is very much beneficial at the time of returns. It is very easy for the buyer, as well as sellers, to workout returns efficiently. If a buyer needs to return a product then he can easily place a return request to the store with the order number and as split cart generates a different order number for different seller then the return request can be easily processed by the seller.

That is all for the module - Split Cart Marketplace Add-On still have any issue feel free to add a ticket and let us know your views to make the module better at webkul.uvdesk.com
