

# B2B Product Variants Matrix V4.0.0

---

## Installation

Customers will get a **zip folder**. Then they have to extract the contents of this zip folder on their system.

It includes an **src** folder, inside the src folder you have the **app** folder.

You need to transfer this **app** folder into the root directory on the server as shown below.

On successfully installing the module, you have to run these commands in the root directory.

### First command –

```
1 php bin/magento setup:upgrade
```

### Second Command –

```
1 php bin/magento setup:di:compile
```

## Third Command –

```
1 php bin/magento setup:static-content:deploy
```

After running the commands, you have to flush the cache from the admin panel by navigating through **System->Cache management** as shown below.

The screenshot shows the Magento Admin Panel's Cache Management interface. A callout bubble points to the 'Flush Cache Storage' button. Below the button, a yellow message box indicates 'You flushed the cache storage.' The main content area displays a table with 12 records found, listing various cache types and their status.

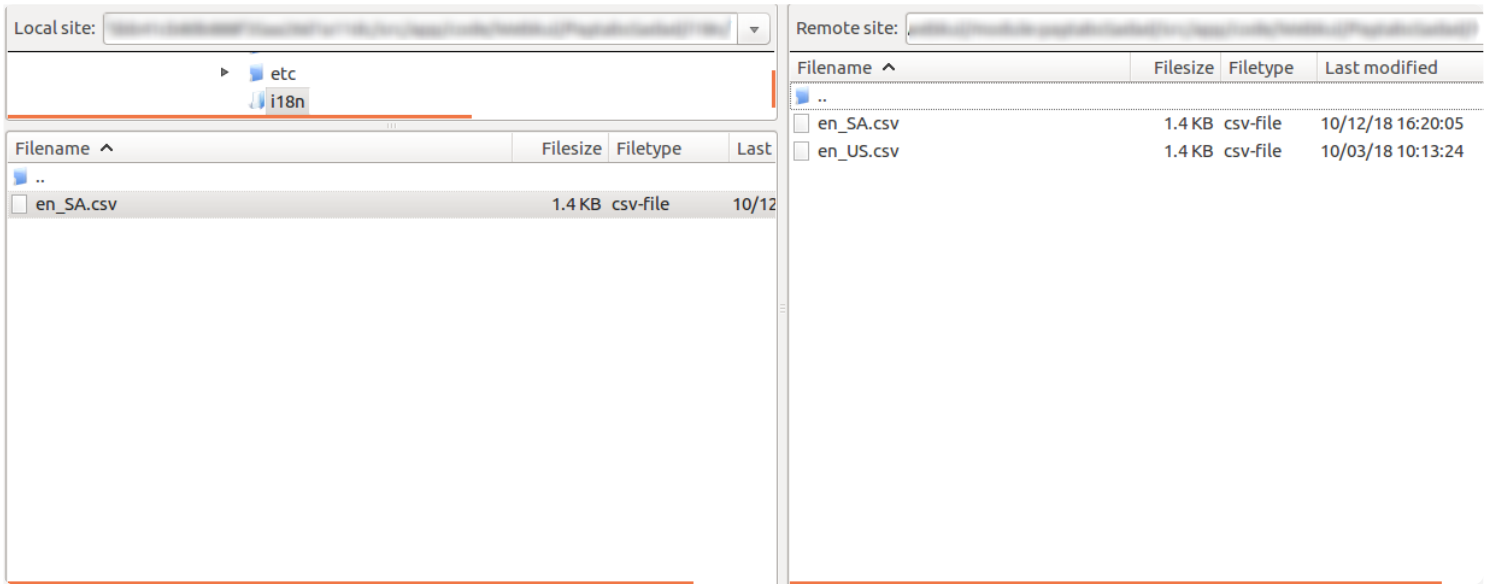

Cache Type	Description	Tags	Status
<input type="checkbox"/> Configuration	Various XML configurations that were collected across modules and merged.	CONFIG	ENABLED
<input type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	ENABLED
<input type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	ENABLED
<input type="checkbox"/> Reflection Data	API interfaces reflection data.	REFLECTION	ENABLED

## Language Translation

For translating the module language, navigate through **src/app/code/Webkul/Product Matrix/i18n** and edit the **en\_US.csv** file.

Thereafter, rename the CSV as “en\_SA.csv” and translate all right side content after the comma in the Arabic language. After editing the CSV, save it.

Further, after installing store on the server, upload it to the path **src/app/code/Webkul/Product Matrix/i18n**.

This translates the module into the Arabic Language. It supports both **RTL** and **LTR** languages.

That's all for the **B2B Product Variants Matrix**. If you face any issue, feel free to add a ticket at [webkul.uvdesk.com](http://webkul.uvdesk.com)
