

Quick Product Edit

Install Extension from Magento Marketplace

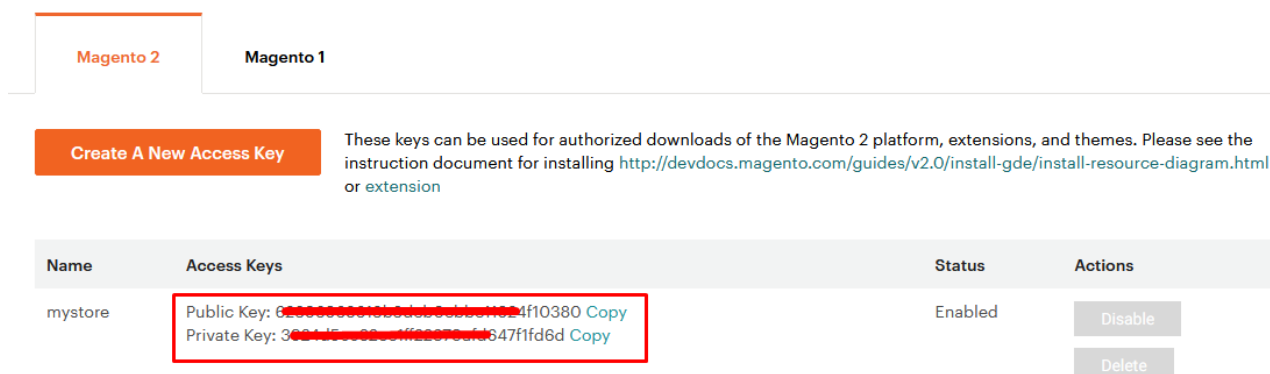

If you have purchased this extension from the Magento Marketplace then please follow the below process or visit [this](#) link.

#1 Get Access Keys

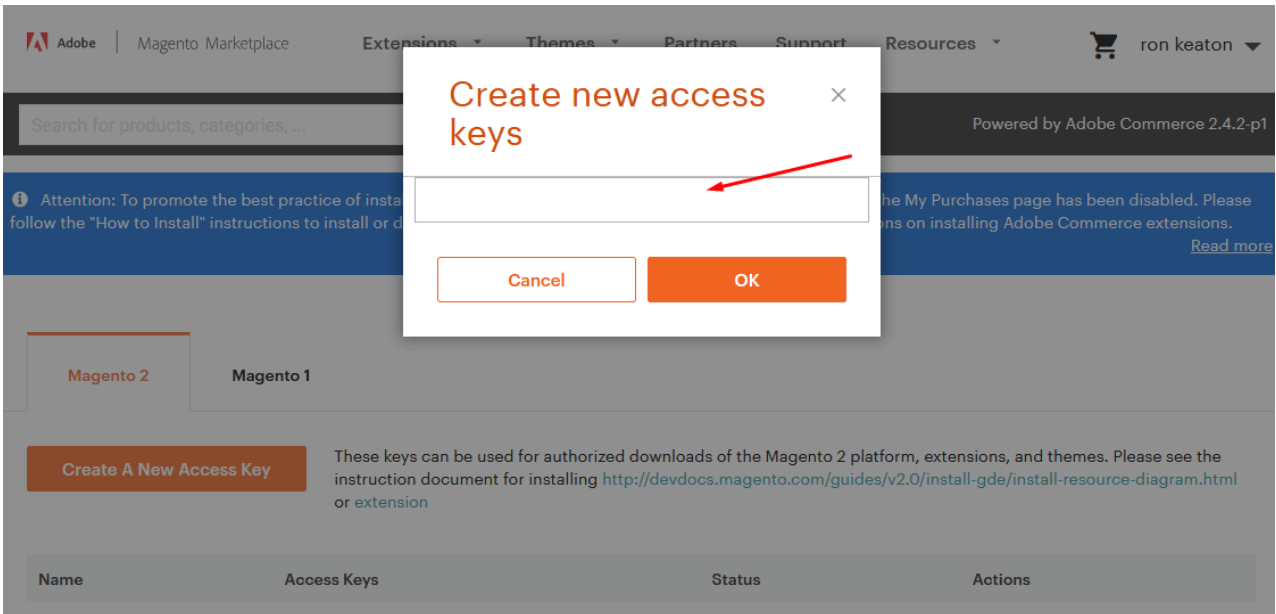

You need to get access keys, navigate to **My Profile** in Magento Marketplace, then choose **Access Keys** in the **My Products** section.

Go to **Magento 2** and then you need to copy both the Access Keys – Public Key and Private Key. These access keys will be needed in the next steps for authentication.

If access keys are not created earlier, click **Create A New Access Key**, enter any name and click OK.

#2 Update composer.json File

To know the component name and version number, go to your Magento Marketplace account section, **My Profile>My Purchases**, then find this extension to view the details. **Please note – Below is an example image, every extension will have its unique component name and version.**

To install an extension or download the extension code for review, you need to use Composer. See "How to Install" section below for instructions. To learn more about Composer, click here: <https://getcomposer.org>.

All Platforms ▾ All Editions ▾

Magento 2

Open Source (CE)

Multi Vendor Marketplace

Component name:

webkul/module-marketplace

Versions available

v4.0.0 ▾

How to Install:

1. Please ensure you are using correct access keys ([My Profile - Access Keys](#))
2. Paste the access keys in your auth.json file inside your project
3. Use the "composer require <module_name>:<version>" command to add the extension to your project. If you just need the extension package code for a specific version (for example, for code review purposes), you can initialize an empty project and just add composer require statement for the extension to a blank composer.json
4. You can see the list of versions in the selector below the extension module name

For detailed instructions, see [DevDocs](#)

After that, navigate to your Magento project directory and update your composer.json file in the following format.

composer require <component-name>:<version>

For example, to install version 5.0.0 of this extension you need to run the following command:

```
composer require webkul/quick-product-edit:5.0.0
```

#3 Enter Access Keys

Now you will need to enter the Access Keys that you obtained as explained in the first step #1 Get Access Keys. Wait for Composer to finish updating your project dependencies and make sure there aren't any errors.

#4 Run Command

You need to run the following commands:

- php bin/magento setup:upgrade
- php bin/magento setup:di:compile
- php bin/magento setup:static-content:deploy
- php bin/magento indexer:reindex
- php bin/magento cache:flush

Language Translation

For translating the module language, navigate through **src/app/code/Webkul/QuickProductEdit/i18n** and edit the **en_US.csv** file. Thereafter, rename the CSV as “en_SA.csv” and translate all right side content after the comma in the Arabic language. After editing the CSV, save it.

Then upload it to the path **src/app/code/Webkul/QuickProductEdit/i18n** where the Magento2 is installed on the server. The module gets translated into the Arabic Language. It supports both **RTL** and **LTR** languages.

The user can edit the CSV like the image below.

```
1 "Your product has been successfully saved","Your product has been successfully saved"
2 "Name has to be completed","Name has to be completed"
3 "Description has to be completed","Description has to be completed"
