

Install Guide - One Time Password Via Twilio

Customers will get a **zip folder** then they have to extract the contents of this zip folder on their system.

Once you extract the file you will find a **src** folder, inside the **src** folder you have the **app** folder.

You need to transfer this **app** folder into the Adobe Commerce root directory on the server as shown below.

After the successful installation, you have to run these commands in the Adobe Commerce Cloud root directory:

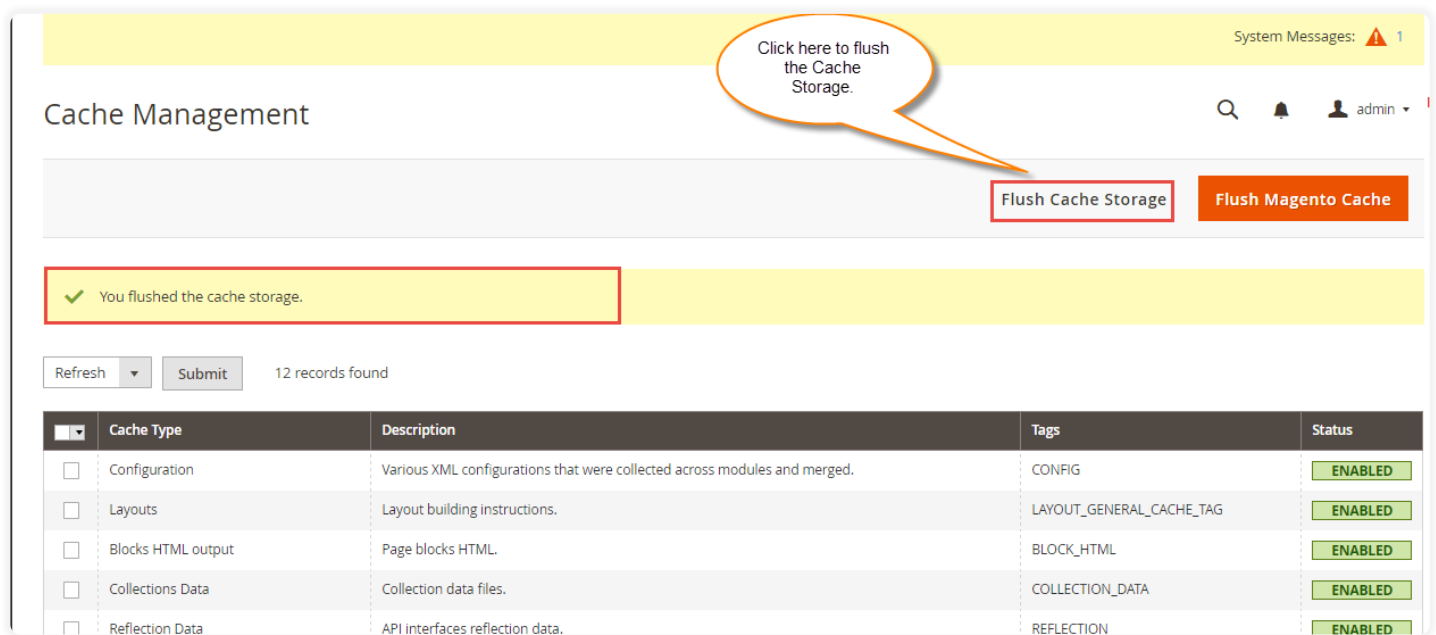

```
composer require twilio/sdk
```

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy
```

After running the commands, you have to flush the cache from the Adobe Commerce admin panel by navigating through->**System->Cache management** as shown below.

Cache Management

System Messages: ▲ 1

Flush Cache Storage Flush Magento Cache

✓ You flushed the cache storage.

Refresh Submit 12 records found

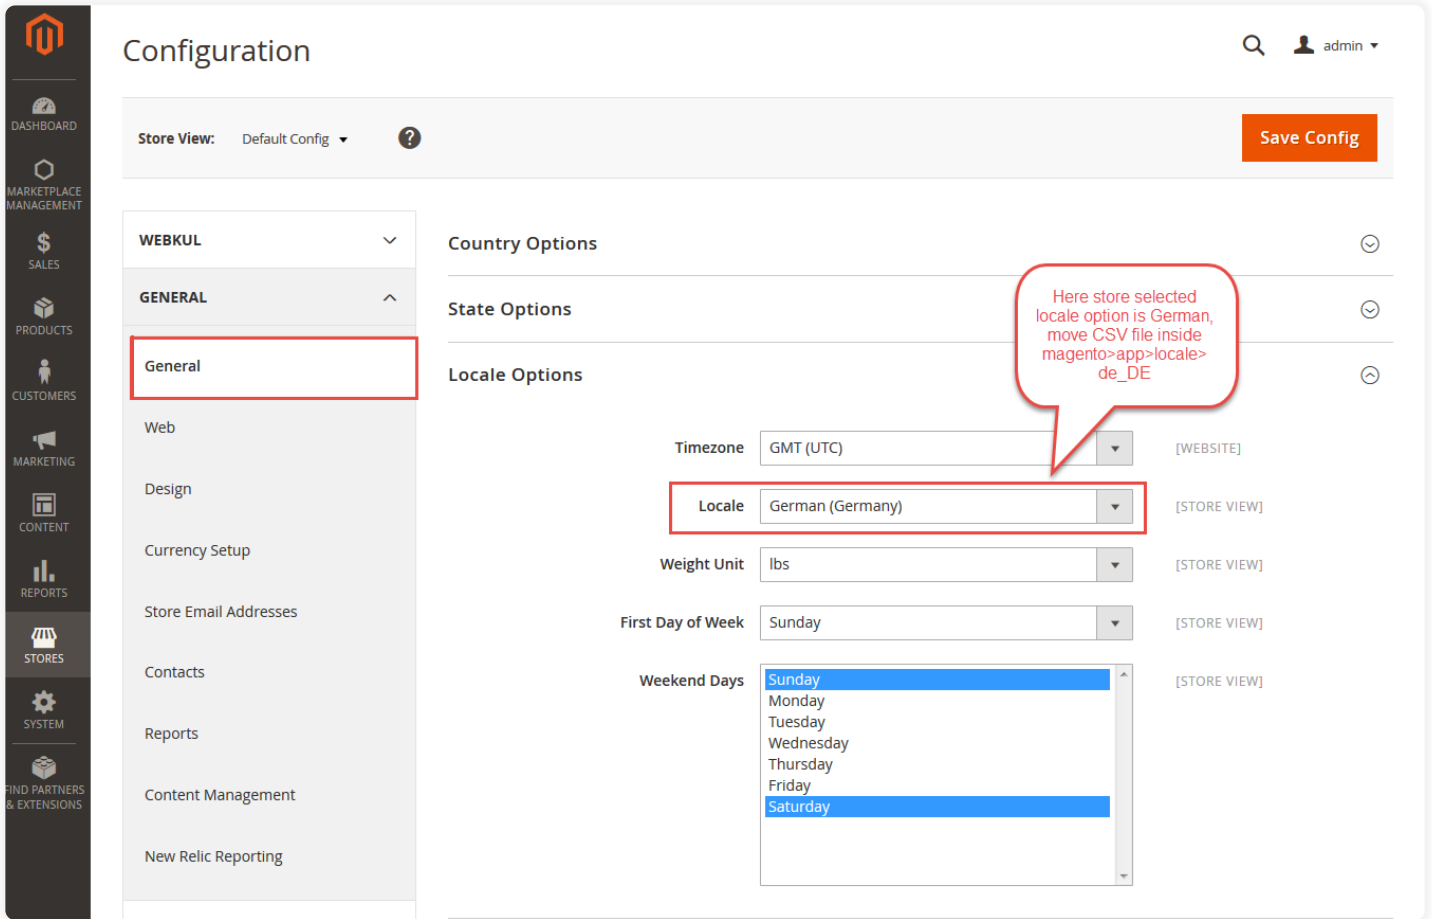

<input type="checkbox"/>	Cache Type	Description	Tags	Status
<input type="checkbox"/>	Configuration	Various XML configurations that were collected across modules and merged.	CONFIG	ENABLED
<input type="checkbox"/>	Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input type="checkbox"/>	Blocks HTML output	Page blocks HTML.	BLOCK_HTML	ENABLED
<input type="checkbox"/>	Collections Data	Collection data files.	COLLECTION_DATA	ENABLED
<input type="checkbox"/>	Reflection Data	API interfaces reflection data.	REFLECTION	ENABLED

Configuration For Multi-Lingual Support

For the **multilingual** support, the admin will navigate through

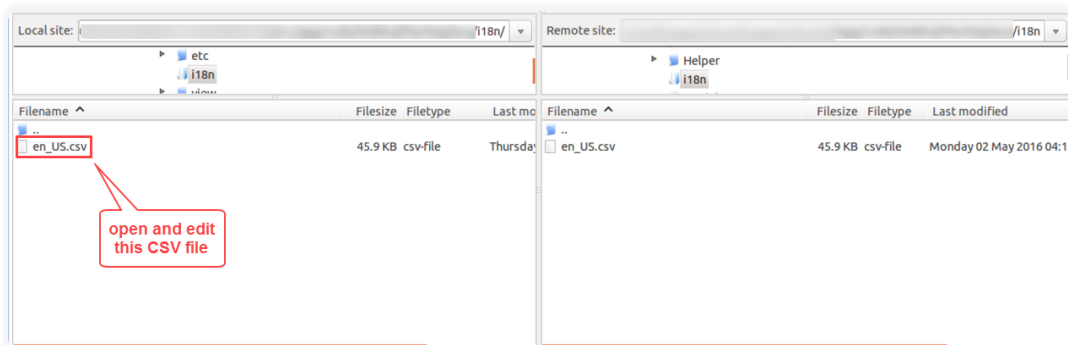

Store->Configuration->General ->Locale Options

then select the **locale** as German (the language into which the admin wants to translate his store content).

Language Translation

For module translation, navigate to the following path in your system **app/code/Webkul/OneTimePassword/i18n/en_US.csv**. Open the file named **en_US.CSV** for editing as shown in the below screenshot.

Then replace the words after the **comma(,)** on the right in the file with your translated words.

```
"An account already exists with this email.,"An account already exists with this email."
"Otp has been sent again. Please Enter the Otp.,"Otp has been sent again. Please Enter the Otp."
"Please Enter the OTP sent to your registered Email Id.,"Please Enter the OTP sent to your registered Email Id."
"Something Went Wrong.,"Something Went Wrong."
"OTP verified.,"OTP verified."
"You have entered a wrong code. Please try again.,"You have entered a wrong code. Please try again."
"Please enter a valid number.,"Please enter a valid number."

"Otp Email Settings","Otp Email Settings"
"Select Otp Notification Template","Select Otp Notification Template"
```

Translate the keyword with your desired language

After editing and translating the CSV file, you need to save the translated file name according to your region language and country code such as – **de_DE.CSV**.

Henceforth by uploading the translated file to the same folder from where you have obtained it. Now your module translation is complete.
