

SMTP Configurator

 webkul.com/blog/smtp-configurator-magento2/

September 30, 2016

SMTP Configurator is a module by which store owner can easily setup an SMTP server on his Webstore so that all the emails send through his store will get sent by the selected host. Magento2 has included this feature so that tracking and sending emails through the store become easy.

Features

- Admin can easily setup SMTP Host.
- Admin can choose various Host Providers.
- Admin can test the host by sending test emails.
- Admin will be able to see the success message for test emails.
- The receiver will receive the email successfully.
- Admin will see an error message for test mails if email sends failed.
- There will be an error message if the mail is not sent to the receiver.
- SMTP configurator works with Multi-Store and Store-Views.
- The same configuration of Host will apply on all Store-Views and Multi-Stores.

Module Configuration

Store Owner can configure SMTP setting by going to **Stores → Configuration → Webkul → SMTP Setting**.

The store owner can also test this feature by sending a test mail, and all the messages, such confirmation message for mail send, error message, etc, will be displayed on the SMTP settings page only.

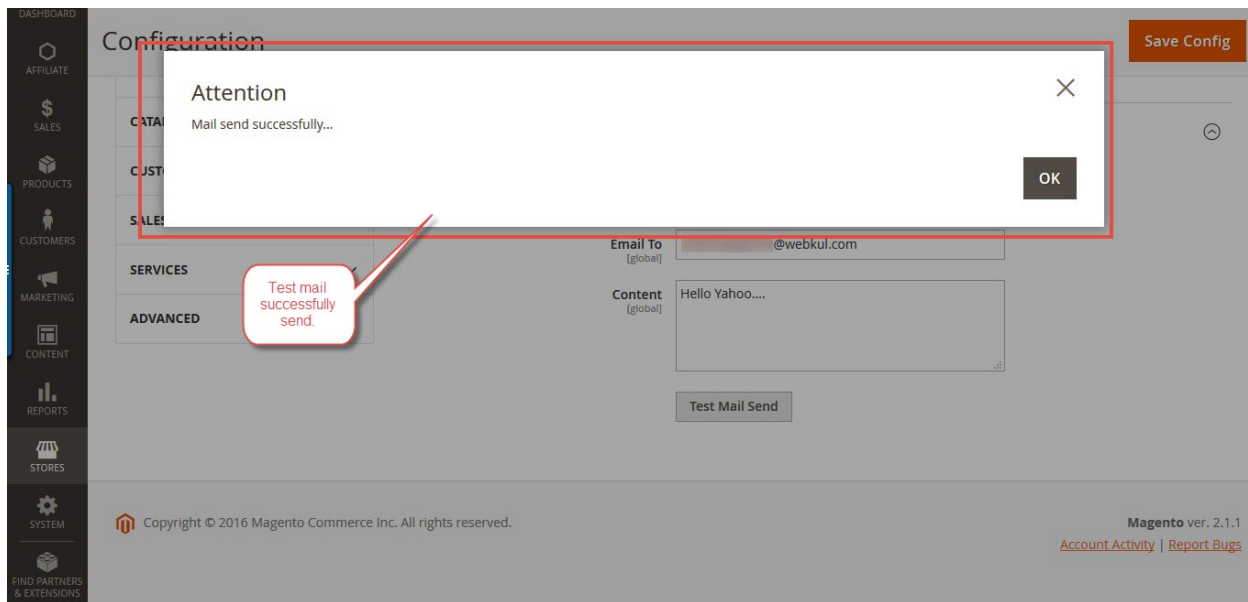

Host Provider – SMTP Configurator

Select the SMTP provider from the drop-down menu.

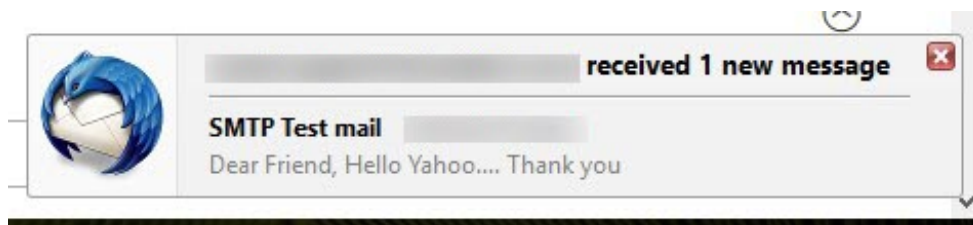

Mail Send Success Message – SMTP Configurator for Magento2

The store owner will see a success message if the mail is successfully sent.

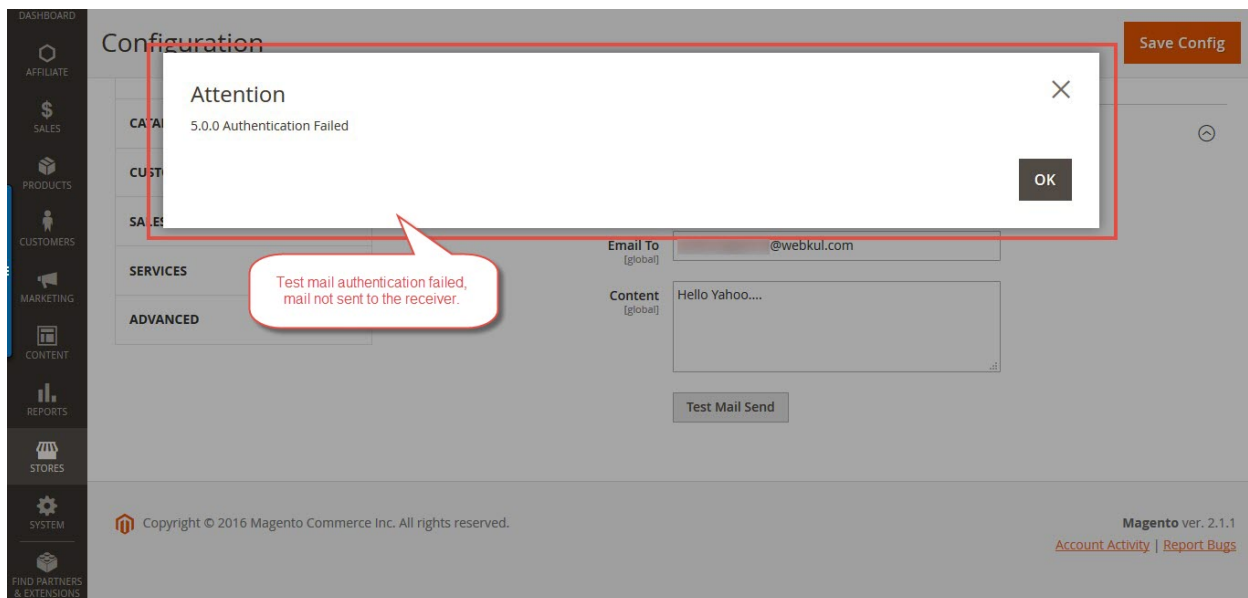

The receiver will receive the mail successfully.

Mail Send Error Message – SMTP Configurator for Magento2

There will be an error message if the mail is not sent to the receiver.

That's all for the **SMTP Configurator**, if you still have any issue feel free to add a ticket and let us know your views to make the module better at webkul.uvdesk.com.
