## 1. Introduction

This extension that comes out of Woom labs makes it possible for merchants to use [WSPay payment gateway](#). Using this extension the merchant's store doesn't process any card information from the customer, but only gets confirmation from the gateway, if the payment went through or not.

## 2. Installation

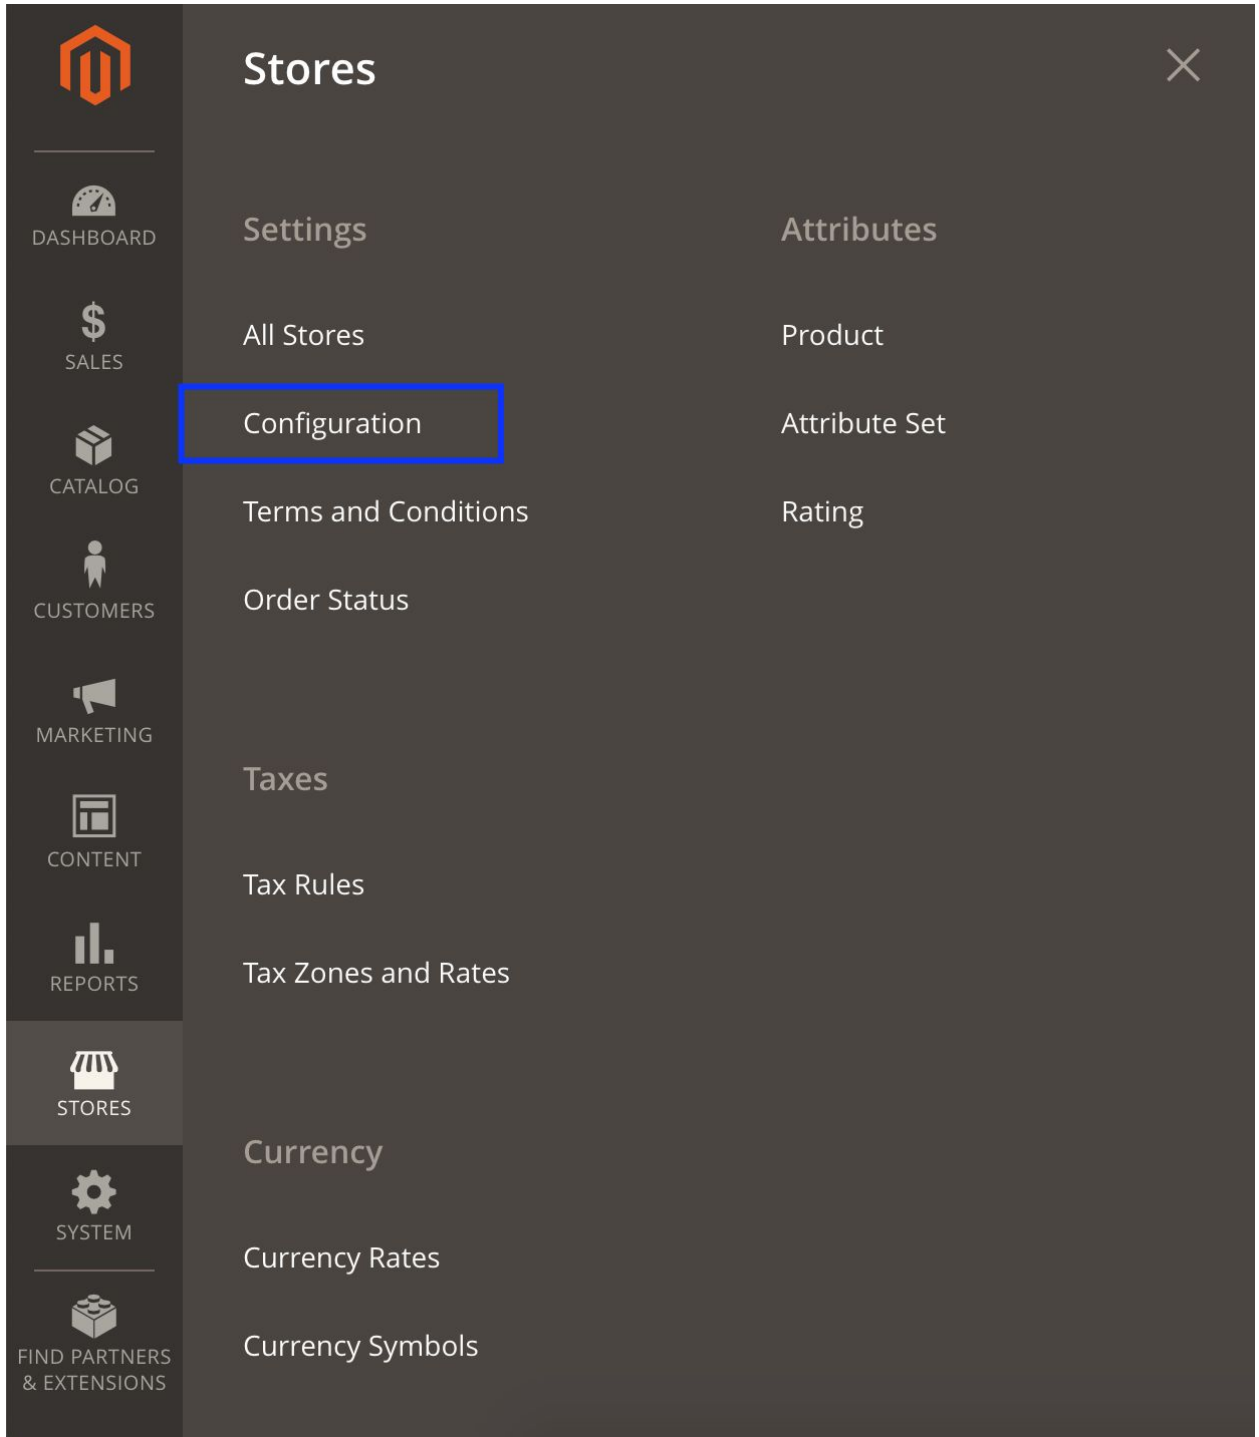

This extension can be installed via:

1. Copying extension contents into app/code folder of your Magento 2 installation
2. Component manager  
<http://devdocs.magento.com/guides/v2.3/comp-mgr/module-man/compman-start.html>

### 3. WSPay configuration

To enable the WSPay module, follow these steps:

1. Open your Magento 2 administration and navigate to “Stores->Configuration” section

2. Expand the “Sales” section and select “Payment Methods”

**Configuration**

- GENERAL
- CATALOG
- CUSTOMERS
- SALES**
  - Sales
  - Sales Emails
  - PDF Print-outs
  - Tax
  - Checkout
  - Shipping Settings
  - Multishipping Settings
  - Shipping Methods
  - Google API
  - Payment Methods**
  - Fraud Protection
- SERVICES

3. Expand the “WSPay” section. Here you configure the payment method. The configuration options will be explained in the next chapter. In order to enable the module, select “Yes” under Enabled and save you changes on pressing the “Save Config” button.

The screenshot shows a configuration form for the WSPay payment method. The fields are as follows:

- Enabled** (website): Yes
- Title** (store view): WSPay
- New Order Status** (website): Processing
- Accepted Currency** (website): Croatian Kuna
- Shop ID** (website): WOOMTST
- Secret Key** (website): \*\*\*\*\*
- Language** (store view): English  
Language in which the WSPay interface will be shown in to customers upon redirect
- Mode** (website): Test
- Authorization Type** (store view): With pre-authorization  
Please select the authorization type you stipulated with WSPay support
- Send Capture API Call To WSPay** (website): Yes  
When invoice is created, capture transaction on WSPay system
- Send Void API Call To WSPay** (website): Yes  
When order is voided or canceled, void transaction on WSPay system
- Send Refund API Call To WSPay** (website): Yes  
When creditmemo is created for invoice, refund transaction on WSPay system
- Payment from Applicable Countries** (website): All Allowed Countries
- Payment from Specific Countries** (website): A scrollable list of countries including Afghanistan, Albania, Algeria, American Samoa, Andorra, Angola, Anguilla, Antarctica, Antigua & Barbuda, and Argentina.
- Instructions** (store view): Empty text area.
- Sort Order** (website): Empty text input field.

## 4. WSPay configuration options

There are multiple options you can configure.

1. Title
  - Sets the title that will be displayed on the checkout
2. New order status
  - Order status order will be set in after payment
3. Accepted Currency
  - Select the currency in which the payment will be made
4. Shop ID / Secret Key
  - Enter the provided data from WSPay (see [Chapter 5 - WsPay interface](#)).
5. Language
  - Sets the language for the payment gateway page
6. Test
  - Enable test mode. Test mode sends all requests to WSPay test endpoints
7. Authorization Type
  - **Please select the authorization type you stipulated with WSPay support**
  - With pre-authorization
    - Payment is immediately captured on WSPay side
  - Without pre-authorization
    - Payment is only authorized on WSPay side
8. Send Capture API Call to WSPay
  - When invoice is created, capture transaction on WSPay system
  - This option is only available if “Authorization Type” is set to “With pre-authorization”
9. Send Void API Call to WSPay
  - When order is voided or canceled, void transaction on WSPay system
  - This option is only available if “Authorization Type” is set to “With pre-authorization”
10. Send Refund API Call to WSPay
  - When credit memo is created for invoice, refund transaction on WSPay system
11. Payment from Applicable Countries / Payment from specific countries
  - If selected, restricts payments to specific countries (billing address)
12. Instructions
  - Sets a custom text, that will be displayed to the customer under the billing address

## Payment Method:

Credit Card (WSPay)

My billing and shipping address are the same

Ime Prezime

Adresa

Grad, Grad Zagreb 10000

Croatia

12345678

Custom Instructions

I understand and accept the terms and conditions

[Continue to credit card details](#)

### 13. Sort Order

- If multiple payment methods are enabled, sorts the order in which they are displayed

## 5. WSPay interface

After you contacted WSPay, you will receive an E-Mail containing the Shop ID and Secret Key that have to be entered in the modules configuration.

### Podaci za spajanje na WSPay - PRODUKCIJA

ID prodajnog mjesta (ShopID):	ShopId
Tajni ključ (SecretKey):	SecretKey
Pregled transakcija:	<a href="https://administration.wspay.biz">https://administration.wspay.biz</a>
*Korisničko ime:	Username
*Lozinka:	Password

## 6. Payment flow

In this chapter the payment flow will be explained.

1. In checkout the customer has to click on the “Continue to Credit Card Details” to be redirected to the WSPay gateway.

### Order Summary

Cart Subtotal	\$100.00
Shipping Flat Rate - Fixed	\$5.00
<b>Order Total</b>	<b>\$105.00</b>

1 Item in Cart ▾

Ship To: ✎

Ime Prezime  
Adresa  
Grad, Grad Zagreb 10000  
Croatia

2. In the Gateway the billing address is transmitted from the checkout and he only needs to enter his card information. The customer then has the option to either “Do purchase” or “Cancel action”

**Credit Card Information**

Credit card type\* :  Number:  Expiration date:   CVC number (?):

**Cardholder personal data**

First name: <input type="text" value="Ime"/>	Last name: <input type="text" value="Prezime"/>	E-mail: <input type="text" value="email@email.com"/>	Phone / GSM: <input type="text" value="12345678"/>
Country: <input type="text" value="HR"/>	City: <input type="text" value="Grad"/>	ZIP: <input type="text" value="10000"/>	Address: <input type="text" value="Adresa"/>

3. If the customer chooses to cancel the payment, he will be redirected back to the cart.
4. If the customer chooses to pay, but his card gets declined, he will be redirected back to the checkout section.
5. If the payment went through, the customer will be redirected to the success page with the confirmation of the payment.
