# Canada Post Integration Module

## Preface

### *About this Module*

The Canada Post Integration Module automatically allows for Canadian customers to choose shipping options the Canada Post Shipping Company. Front-end styling will match that of the Magento template that the clients current shopping card is running on. On the back-end, the module can be configured under Stores -> Shipping Methods.

**An account or sandbox account with Canada Post is required for this module to work properly.**

### Compatibility

Magento Community Edition 2.1

Magento Enterprise Edition 2.1

### Changelog

07/22/16 First stable version of the extension (v1.0).

# Features Overview

This extension gives the client the option to auto-notify customer by email when their order is received, on shipment and shipped, this feature can also be turned off, or for manual notification only.

A tracking number will automatically be generated after the Canadian customer order, and shipping labels can be viewed and printed directly from the back-end.

Payment can be received by electronic check, debit, major credit cards, money order or Purchase Order - any of these payment methods can be disabled by the admin.

Item, Quantity and SKU number will be shown in the order details on the back-end and on the front-end to the customer.

Shipping types supported: Expedited Parcel, XpressPost, Priority WorldWide, Small Packet US Air.

The module works for small businesses that Canada Post's account doesn't have contract id for.

# Module Configuration

Go to MENU -> Web Solutions NYC -> Canada Post to enable or disable the module

Enable select "Yes" to enable or "No" to disable the module.
