

Advanced Inventory

Installation instructions

Manual Installation

You can install the Advanced Inventory manually.

1. Download Advanced Inventory (zip file) from your Wyomind account in:
My downloads
2. Once Advanced Inventory is downloaded, open the folder and unzip it.
3. Copy the content of the unzipped folder and paste all files and directories in your Magento 2 root directory.
4. In your Command Line Interface, execute:
`bin/magento setup:upgrade`

If you are using a production mode, execute also:

```
bin/magento setup:static-content:deploy  
bin/magento setup:di:compile
```

Extensions activation from the CLI

Once Advanced Inventory is installed, you have to activate the license.

For this, you can use the below command line (change the Activation key with the corresponding value):

```
bin/magento wyomind:license:activate Wyomind_AdvancedInventory  
<YOUR_ACTIVATION_KEY>
```

To retrieve the list of all the available modules as well as the licenses status, please use:

```
bin/magento wyomind:license:status
```
