

Advanced Inventory

Configuration Instructions

Configure Advanced Inventory in a general way

You can start with configuring your extension in a general way and according to your needs in *Stores > Settings > Configuration > Wyomind > Advanced Inventory*.

Settings

The following settings are essential to configure the *Advanced Inventory* extension for Magento 2 according to your needs.

Advanced Inventory enabled: you'll have the possibility to disable the *Advanced Inventory* stock management by setting this option to **NO**. Stocks will then be managed natively in Magento 2. This feature is useful for example when you've just installed the *Advanced Inventory* extension and you're configuring stock management.

Multiple assignation enabled: with *Advanced Inventory* for Magento 2, you can assign orders to many points of sale or warehouses.

Automatic assignation enabled: if you activate the automatic assignation, your orders will be automatically assigned to one or more points of sale/warehouses according to the store view of the order, the customer group, the priority of the point of sale, the assignment rules and shipping address, the availability of the items in the stock.

Notifications in backend enabled: if you enable order assignation notifications, you should get a message at the top of your admin saying some orders need your attention and have to be assigned to a point of sale or a warehouse.

Start date for order notifications: you can edit the start date for order assignation. Then only the orders placed after that date will be managed.

Order status disallowed for manual assignation: *Advanced Inventory* allows you to disable assignation update according to order statuses such as **Complete** or **Canceled** orders. Then it won't be possible to modify stock assignation for orders with these statuses.

Automatic stock status updated enabled: you can also enable an option to automatically update stock status when product quantities are changed from the admin panel.

Settings

Advanced Inventory Enabled: Yes [GLOBAL]
If Advanced Inventory is disabled, stocks are managed natively in Magento

Multiple assignment enabled: Yes [GLOBAL]
If enabled, one order can be assigned to different POS/WH instead of an unique POS/WH

Automatic assignment enabled: Yes [GLOBAL]
If enabled, orders are automatically assigned to one/more inventory by using:
1. Store view of the order
2. Customer group
3. Priority of the POS/WH
4. Assignment rules based on shipping address
5. Availability of the items in the stock

Notifications in backend enabled: Yes [GLOBAL]
If enable, a notification is displayed when orders are unassigned to any POS/WH

Start date for order notifications: 2015-12-01 [GLOBAL]
Start notification for orders placed after this date

Order status disallowed for manual assignment: [GLOBAL]
Cancelled
Closed
Complete
Payment Review
Processing
On Hold
Pending
Pending Payment
If enabled, the stock assignment for the above order statuses can't be edited.

Automatic stock status update enabled: No [GLOBAL]
If enabled, the stock status is automatically updated when product qty are changed from the admin panel or when one order is placed

System

With *Advanced Inventory* for Magento 2, you have the possibility to use some useful tools to save all the logs and the stock movements you have made.

Enable log file: by enabling the log file, all actions will be logged in `var/log/advanced-inventory-dd-mm-YYYY.log`

Enable the stock movement journal: the stock movement journal is a useful tool that will allow you to see what has been done and if your stock changes have been taken into account. Go to *Sales > Point of Sale > Stock movement journal* to check your stock movements.

Stock movement journal lifetime history: You can also define the number of days you want to include in the **Journal history**. Any stock movement older than this value will be automatically deleted.

System

Enable log file [GLOBAL]

If enabled, all actions are logged in var/log/advanced-inventory-dd-mm-YYYY.log

Enable the stock movement journal [GLOBAL]

If enabled, all stock movements are written in the stock journal

Stock movement journal lifetime history [GLOBAL]

All entry older than X days will be automatically deleted.
