## Orders Export Tool variable

The **instance** defines the different database tables that group the orders data. What is targeted: Order, Product, Shipping address, Billing address, Payment, Invoice, Shipment or Creditmemo?

For example, **instance** must be replaced by: "order", "billing", "payment"...

`{{order.entity_id}}`

Any basic **data** in Magento 2 can be used in the data feed pattern.

For example, **data** must be replaced by: "lastname", "street", "country\_id"...

`{{billing.firstname}}`

You can include any PHP function in your variable

For example:

`{{order.customer_name php="strtoupper($self)"}}`

= dl 'id' j hZ' Dg' YZgh' Z nēdg' i dda' c' ) ' hi Zeh4
