

Zip Plugin User Guide For Magento2

Installation

Zip gives customers the ability to shop now and pay later with no interest while you as the merchant get paid immediately. Customers select Zip at checkout and get approved instantly and shop securely. Zip is fully integrated with the store's online checkout and can integrate seamlessly with your store directly via API or by using one of our platform plugins.

Prerequisites

- PHP 7 or above
- Configuration credentials
- Composer (optional)

Install via SFTP or file upload

- You need to download code from the repo <https://github.com/zipMoney/zip.magento2>
- Put the current repo files into folder `/yourMagento2root/app/code/Zip/ZipPayment/`
- Then follow the normal plugin installation below without the composer require command

Install using Composer

To install the extension via [Composer](#), run

- `cd <your Magento install dir>`
- `composer require zip/magento2`
- `php bin/magento module:status` (Check if Zip_ZipPayment module is disabled)
- `php bin/magento module:enable Zip_ZipPayment` (enabled plugin if disabled)
- `php bin/magento setup:upgrade`
- `php bin/magento setup:di:compile`
- `php bin/magento setup:static-content:deploy`

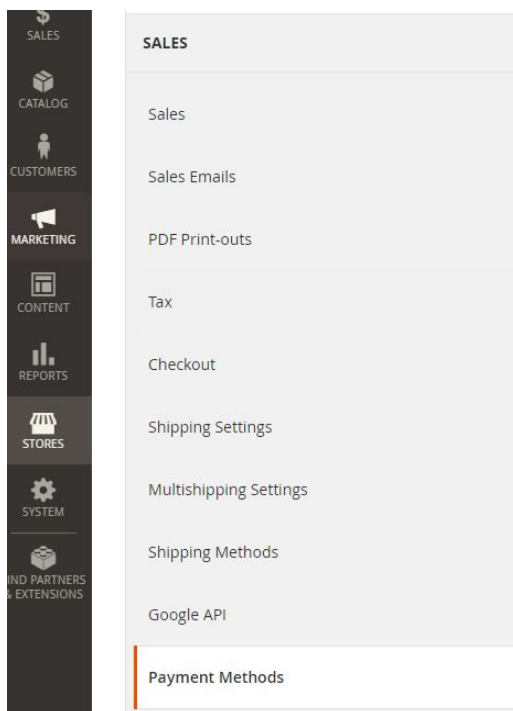

To upgrade Existing Modules

- `composer update zip/magento2`
- `php bin/magento setup:di:compile`
- `php bin/magento c:c`
- `php bin/magento setup:static-content:deploy`

Configuration

Payment Section

1. Contact Zip integrations support through one of the following channels depending on your region to request your configuration credentials:
 - UK: integrationsuk@zip.co
 - NZ: integrationsnz@zip.co
 - AU: integrations@zip.co
2. Open the Magento Admin
3. Click the Stores icon in the left hand menu and from there choose Settings > Configuration
4. The configuration page will open. From the little menu on the left hand side of this screen you must click Sales and then choose Payment Methods when it expands.
5. On the Payment Methods page, click Other Payment Methods so it expands.

Check Zip credential

WARNING

- Your store AU Store (<http://10.41.10.23/>) does not have SSL
- Api key is valid for Cotton On
- Api is valid for below regions:
 - Australia
 - New Zealand
 - United Kingdom
 - United States
 - South Africa

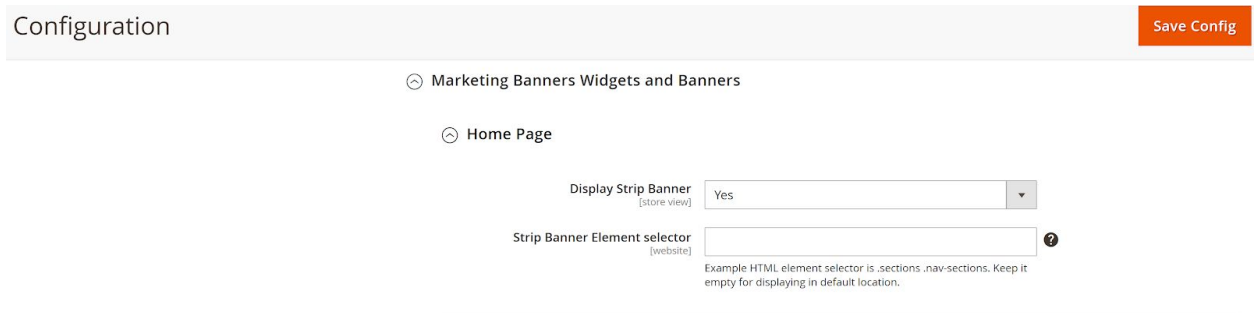

5. Region for Widget, Please correct regions like Australia or other available regions. You can select a region at store level if you have multiple stores. Depending on the region you frontend will show the correct zip widget in the Home page, category page, product page and cart page. Which page you want to show the widget depends on the “Marketing Banners Widgets and Banners” section setting. Which we describe later.
6. Set payment action to Capture, or Authorise if you want to authorise on checkout completion and capture later.
7. Display Widget mode set iframe or inline. Iframe will show a zip widget in your store frontend inside the iframe. Inline it will show without iframe. Inline mode later on you can modify the style or css class as per your need.
8. Set log settings to Info or Debug if you want to log all the debug information as well.
9. Set Minimum and Maximum order value, the method will show in your site checkout if your cart total sits between minimum and maximum. If you do not set these minimum and maximum order values then the payment method will show for any cart value.
10. Set Sort Order to 0 to place the payment method on top.

Marketing Banners and Widgets Section

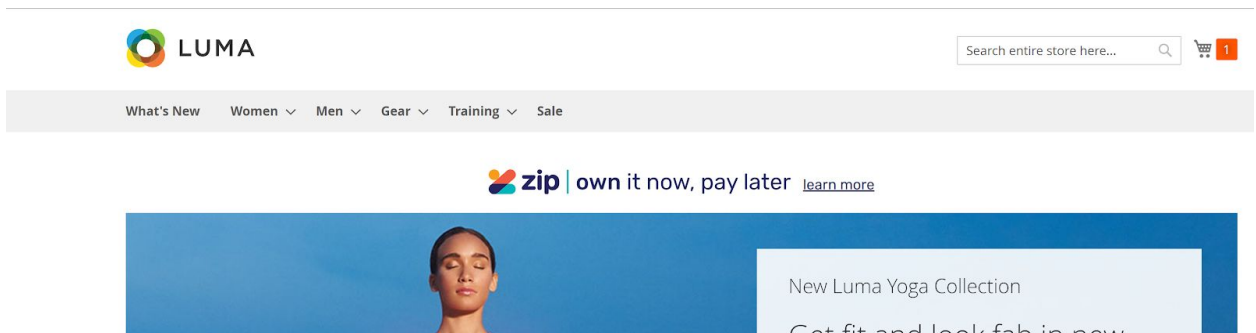

1. Scroll down and expand Marketing Banners and Widgets section
2. Expand everything and set all options to Yes/No as per your requirement.
3. Click Save Config up the top

If your Home page “Display Strip Banner” is yes

Then you can see the zip banner in the homepage after the breadcrumb like below image.

If Product page setting is like below

Configuration Save Config

Product Page

Display Strip Banner [store view] Yes

Strip Banner Element selector [website] ?
Example HTML element selector is .sections .nav-sections. Keep it empty for displaying in default location.

Display Widget [store view] Yes

Product Widget Element selector [website] ?
Example HTML element selector is .product-info-price. Keep it empty for displaying in default location.

Display Tagline [store view] Yes

Tagline Element selector [website] ?
Example HTML element selector is .product-options-bottom. Keep it empty for displaying in default location.

Then your product page will show the three widgets. First one is the Display Strip Banner which is showing after page breadcrumb. Second one is Display Widget which is displaying under product price and the third Display Tagline which is displayed under the add to cart button.
